11. (Currently Amended) An organic electronic componentdevice comprising:
a substrate having a surface with a first portion and a second portion,
without a well structure connected to or adjacent the first portion of the surface or the
second portion of the surface, wherein the first portion of the surface has a first
surface energy and the second portion of the surface has a second surface energy;
and
a liquid composition covering the first portion of the surface and contacting
the second portion of the surface, wherein the liquid composition has a third surface
energy that is higher than the first surface energy and lower than the second surface
energy; and
an organic active material.

12. (Currently Amended) The organic electronic componentdevice of claim 11,
wherein the liquid composition includes an organic active material.

13. (Currently Amended) The organic electronic componentdevice of claim 11,
wherein the second portion includes a charge transport layer.

14. (Currently Amended) The organic electronic componentdevice of claim 11,
wherein the first portion includes an insulating layer and the second portion includes
an electrode.

15. (Currently Amended) The organic electronic component device of claim 11,
wherein the first portion of the surface includes a surfactant.

16. (Currently Amended) The organic electronic component device of claim 15
wherein the surfactant includes a fluorine containing material.
